Collocations are natural combinations of words that frequently appear together in English. These combinations **sound** natural to native speakers, but students of English have to learn them with practice because they are often difficult to guess. The unnatural combinations are wrong for native speakers of English. As an example, the adjective "fast" collocates with "cars" but not with "look." Learning collocations is the most important part of learning the vocabulary of a language. Some collocations seem fixed or very strong. In "take a photo," no word other than "take" collocates with the photo to give the same meaning. The other example is "make an effort" and not "do an effort."

Some collocations are more open, because several words may go together to give a similar meaning, for example, "keep to or stick to the rules." Sometimes, a pair of words may not be wrong, and people will understand it, but it may not be the natural collocation. If someone says I did a few mistakes, a fluent speaker of English finds out that it would probably be "I made a few mistakes."

Paying attention to collocations while reading or listening can help you recognize them naturally. Practicing them in speaking and writing can improve your fluency. By learning collocations, you also expand your vocabulary because you learn how words are commonly used together. In this way you can make your English more effective and natural.

53. A word that is often used naturally is called collocation. **True – False**

54. In learning the words of a language, learning collocation is essential. **True – False**
