4	**متن زیر را با دقت بخوانید و به سوالات داده شده پاسخ دهید.** One of the most important discoveries of the 19th century was a method of using natural gas for cooking and heating. Large amounts of natural gas are found in the United States, usually several thousand feet below the surface of the earth. Natural gas is most often found in place where petroleum – the oil from which gasoline is made – is found. Often the natural gas must be taken out before the oil itself can be reached. For many years, after people discovered natural gas, they thought it had no value. Finally, however, people began to understand its uses and to find ways of storing it and of moving it from one place to place. Today, natural gas is stored in large tanks and used for lighting, cooking and heating. In many ways natural gas is one of our finest fuels. People can use it for cooking without making the room hot.
