Most people know that not getting enough sleep is not healthy. But is it possible to get too much sleep? Most doctors and scientists seem to think so. In fact, too much sleep can make people feel even more tired than getting a normal long night's sleep.

Doctors recommend that people get between seven and nine hours of sleep a night. If a person still feels tired after eight or nine hours of sleep, however, more sleep is not the answer. In fact, sleeping more than nine hours a night may be a sign of a medical problem. When people sleep too long, they might not get enough sunlight or exercise, and their bodies may tell them that they need more rest. This can make people's bodies weaker, and they may catch colds or even get other, more serious diseases more easily.

Some scientific studies have shown that people who sleep more than nine hours a night are 50% more likely to get diabetes, and more than 20% more likely to be fat. Too much sleep has also been linked to having more headaches, back pain, depression, and even heart disease.
