A dictionary is a very important tool for anyone who is learning a new language. With a good **one** you can do the following ;you can **look up** the meaning of an English word you see or hear; to find a word quickly, you need to know the English alphabet perfectly. For words with more than one meaning you should choose one makes more sense in the context; checking the spelling and pronunciation are others facilities that a dictionary offers. Also to check the plural of a noun , part of speech , or past tense of a verb, a dictionary is helpful.

| ۳ | **متن زیر رابخوانید و به سوالات داده شده در هر قسمت پاسخ دهید.**<br>What's the most useful way of learning a language? Is it writing essays or doing grammar exercises? The answer is clear: whatever you like doing. Evidence shows that the most successful language learners are those who find something **they** like to do with their chosen language and do it again and again. And it doesn't really matter what the activity is. Some of the clearest evidence of this has come through research into reading. Stephen D. Krashen, a well-known second language researcher, decided to look at how well language learners who read for fun did in grammar test. He discovered that they did better than people who went on courses and it wasn't important what books they read. To prove this, he gave students books from a series called Sweet Valley High. These are popular books about teenage life. Although the books' literary quality may not have been high, the readers made good progress in vocabulary, reading, and speaking tests. In a separate case study, a girl improved her writing so much that her angry teacher accused her of copying. The only explanation she had was that she'd started reading regularly.<br>٤٧. **What was the primary purpose of the passage?**<br>a) To introduce a researcher and his recent findings<br>b) To prove inaccuracy of a commonly held view<br>c) To answer a question related to learning a language<br>d) To describe one of the most important research findings | ۱۵ |

Hydropower is a type of renewable energy. It uses water to make electricity. Water moves in a large cycle and then goes back to the ocean. The energy of this water cycle produces electricity.

Because the water cycle is an endless system, hydropower is a renewable energy. When falling or running water is turned into electricity, it is called hydroelectric power or hydropower. Turbines convert the water energy into electricity which is then used for houses and businesses. This clean renewable energy is used in some countries to keep their cities
